Invitation to the
**7th French-German Workshop on
Oxide, Dielectric, and Laser Crystals 2018**

at 13th and 14th of September 2018 in Idar-Oberstein
At: FEE, Struthstr. 2, 55743 Idar-Oberstein

Program:

Start: Thursday, 13.09 2018, 14:00; Dinner at FEE in the evening.

End: Friday, 14.09.2018, 13:00; with possibility to visit FEE.

The present workshop is a continuation of the DGKK meetings on „Crystals for lasers and NLO“ and previous workshops organized at FEE (2011, 2014), ISL (2012, 2015), IKZ (2016) and ICMCB (2017).

The workshop – as part of the DGKK-Arbeitskreis Kristalle für Laser und Nichtlineare Optik – brings together universities, institutes and industry to explore and discuss single crystal growth of inorganic materials, characterization methods and application, e.g. in the field of optics and piezoelectricity.

We encourage you to present your last results in an oral presentation (15 - 25 minutes plus 5 minutes for questions). Therefore, please send also the title and the list of authors in the commitment email. A one-page abstract for the abstract book is needed four weeks before the workshop. Ample time will be made available for discussions – especially during the “Spießbraten” dinner offered in the evening at the grill cabin of FEE on the shore of the Nahe river.

Please indicate your participation until August 10th to: Dr. Sebastian Schwung (schwung@fee-io.de). A workshop fee of 30 € including hospitality during the coffee breaks and the traditional “Spießbraten” dinner has to be paid until August 17th (account see below)

Looking forward to an interesting workshop,

Dr. Sebastian Schwung

FEE

(*) Please forward this information to potentially interested colleagues not included in the distribution list.
